

To: FCC

Dear Sir/Madam:

As a long-time holder of Amateur Radio License K6YOQ and a degreed physicist, I feel that the proposed BPL may well destroy amateur HF radio as we know it. I urge members of the FCC to take a hard look at the interference potential of BPL. Amateur Radio, as you know, is far more than a simple hobby. It provides emergency communications many times every year, and also provides a pool of trained operators, versed in modern communications technology. Implementing a scheme, such as BPL, that has the capability of destroying HF amateur radio, would be not only counterproductive, but nationally irresponsible.

Yours truly,

Michael Fallon K6YOQ
